Work Experience

AI Trainer and Evaluation Specialist, *Handshake AI*

Jul 2026 – Aug 2026

- Red-teamed GPT-5.5 Pro across 28+ tasks, designing multi-source research prompts that achieved model failure rates above 90% per submission.
- Delivered 17 tasks to Ready-to-Deliver stage, 3 to Audit, and 8 in R1 review, maintaining a 91% approval rate and 3.3/5 quality score.
- Authored 6–8 step golden trajectories per task, each chaining 3+ independent verification sources from government archives and digitized historical collections.
- Maintained only 0.1 major and 0.1 minor issues per task across all submissions while collaborating with 10+ reviewers to resolve feedback within review cycles.

Skills

Languages: Java, Python, C, HTML, CSS, JavaScript, TypeScript

Technologies: ViteJS, Machine Learning

Tools: Git, GitHub, VS Code

Domains: Web Development, Front-End Development, Blockchain (Beginner)

Projects

AskIT | *Multi-Agent RAG Knowledge Base Platform*

- Built a full-stack RAG platform where admins ingest PDFs and URLs into a vector knowledge base and users query it via an AI chat interface that returns answers with citations.
- Designed a multi-agent pipeline (Planning → Retrieval → Synthesis) using ChromaDB for semantic search and Groq's LLaMA 3 for response generation.
- Implemented role-based access with Supabase Auth and org-scoped retrieval, separating admin (knowledge base management) and member (querying) workflows.
- **Tech:** React, FastAPI, Supabase, ChromaDB, Groq API, sentence-transformers

SEHAI | *AI-Powered Rural Healthcare Platform*

- Built an XGBoost classifier predicting 42 diseases from 133 symptoms and fine-tuned ResNet18 CNNs for eye (4 classes) and skin disease (14 classes) classification.
- Developed a 3-tier role-based web app (ANM / PHC / CHC dashboards) digitising India's public healthcare referral chain with persistent patient records.
- Integrated voice-enabled multilingual symptom capture for low-literacy field workers using the Web Speech API.
- **Tech:** Python, FastAPI, XGBoost, PyTorch, React (TypeScript), PostgreSQL

SRS Builder *Live*

- Built and deployed a client-side React tool that converts GitHub README content into IEEE 830-compliant LaTeX SRS documents, fully free, no API calls, no backend.
- Gained 400+ visitors organically; actively used by classmates for academic PBL submissions.
- **Tech:** React, TypeScript, Vite, Vercel

Achievements

- Finalist at IEEE INDICON Intel Hackathon 2024 (IIT Kharagpur), developed an AI-based healthcare prediction system using PyTorch and Intel technologies.
- Top 50 Team out of 250+ at Vichar Vikaas Ideathon, received pre-incubation support from AIC, Manipal University Jaipur.
- Top 13 Team out of 60+ at GDG x Dell Ideathon 2026.
- Secured 2nd Place at GDG MUJ Hackathon 2026 Tech Sprint.

Education

Manipal University Jaipur

B.Tech in Computer Science and Engineering

Aug 2024 – Present

CGPA: 8.63/10
